1 Background

1.1 Overview

SWRMD-II

The SWRMD-II was designed as part of the second water SPS that has a long-term time horizon of at least 15 years in order to achieve sustainability. The SWRMD-II itself is of five years duration, and will focus on further consolidation of the achievements obtained during the WRAP and the SWRMD-I in order to prepare for gradual withdrawal of the donor support and leaving a sustainable and well-functioning the WRMD.

The SWRMD-II will also focus on devolution of certain responsibilities of WRM to local government level. In this way, the WRMD wants to pursue the opportunities that arise as a consequence of upgrading of the general skills and capacities at local level, as other responsibilities such as rural water supply are already functions at local government.

Mandate of WRMD

The mandate of the WRMD is to:

"Promote and ensure the rational and sustainable utilisation and development, and the effective management and safeguarding of water resources of Uganda for social and economic welfare and development".

The functions of WRMD required for achieving its mission, as stated in the Post Constitutional Restructuring Report of the Ministry of Water, Lands and Environment, 1998 include:

- monitoring the quantity and quality of surface water and groundwater resources;
- providing reference WQ laboratory facilities and services;
- water resources data storage, processing and dissemination of processed data to all users;
- water resources assessment studies and advice to other DWD departments and projects as well as other government organisations;

- formulation and review of water resources development and management plans;
- advising the WPC on trans-boundary water policies and agreements to ensure their equitable use and adequate protection;
- advising Government on water resources developments and their impacts, including advice to NEMA on environmental impact assessments;
- setting standards for WQ and effluent (waste water) discharge, in consultation with NEMA; and
- processing, monitoring and enforcement of permits for water abstraction, wastewater discharge, drilling permits and construction of hydraulic works under the Water Statute, 1995.

Water Sector Programme Support

Development partners in the water sector have during last year moved to a broader joint based Sector Programme Support (SPS). As a result, the support in WRM:

- should aim for a longer term perspective (more than ten years):
- seck to emphasise local ownership and institutional anchorage, at appropriate level;
- target capacity building and institutional development; and
- aim to contribute to organisational, technical and financial sustainable development.

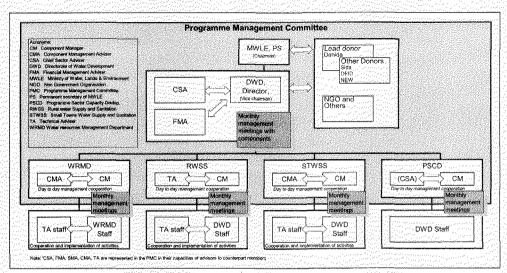

The water SPS is formulated within Uganda's water sector policy and highlights the need to ensure functioning policy and management in the sector.

A Joint Partnership Fund (JPF) arrangement between the Government of Uganda (GoU) and development partners (Danida, Sida and DfID) has been agreed in terms of a move towards budget sector support often referred to as basket funding. The JPF is headed by a Programme Management Committee (PMC), (Figure 1), whose role is to:

- continuously formulate the policies under which the water SPS, presently counting four components, is executed, and
- ensure that the different components are achieving their outputs and objectives as set forth in their respective programme documents.

3

Note: The structure of the PMC may still not have taken its final form.

Figure 1: Organogram of the Joint Programme Fund

1.1.1 Integrated Water Resources Management

In order to understand the concept of the WRMD's strategy, the IWRM process is briefly outlined in the following.

Integrated Water Resource Management (IRWM) may be defined as by the Global Water Partnership as an interactive process which promotes the coordinated development and management of water, land and related resources in order to maximise the resultant economic and social welfare in a equitable manner without compromising the sustainability of vital ecosystems.

In the first place, it is emphasised that water resources concerns all water phases and properties, i.e. surface water and groundwater, quantity and quality, water supply and wastewater discharges.

The process falling under WRMD's mandate is underlain by the policy formulation and its passing of bills to legal acts on the one side, and the awareness raising and collaboration with water sector actors, such as agencies, departments, ministries, districts, etc. on the other, where the decentralisation process is an important issue. On top of this are the technical aspects that serve to provide the necessary information for the underlying process. The two layers are linked by feedback mechanisms (depicted in Figure 2).

The technical aspect in the WRM process starts with monitoring in the field and passes through quality control, storage and analysis and interpretation of the data. Ideally, the next step is to prepare a water resources assessment management plan for the internationally accepted geographical unit of a river basin, including a rational allocation of the resource among the users. This step has not yet been possible to develop in Uganda, but shall be embarked upon during SWRMD-II. The following steps are to undertake studies with specific pur-

poses, here divided into two categories, water use and water protection. It is at this stage where regulation comes into the picture.

Since WRM is a process, feedback is used to adjust it, for instance when new water issues emerges the monitoring may be adjusted accordingly and new analyses included. This will again link to the formulation of policies and introduction of byelaws.

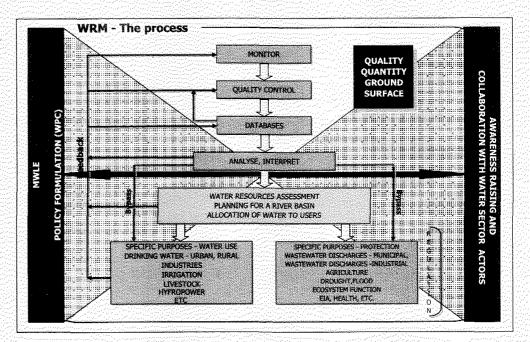

Figure 2: The processes and activities in WRM

1.2 Status of SWRMD II

Inception period of SWRMD II

The inception phase of SWRMD-II is phased in two as it builds on the Sub-Sector Reform Study (SSRS). The first phase was concluded in November 2003 and the second phase is expected concluded in March 2004 (subject to completion of the SSRS).

The inception phase has served to:

- in-depth analyses of the SWRMD-II programme starting at the achievements of SWRMD I and the lessons learned;
- Preparation of strategies for integrating the different programmes at WRMD and the water monitoring networks;
- detailed planning of scope and documentation of activities; and
- implementation of consolidation and monitoring activities.

Consolidation of the Inception phase

A consolidation workshop was held on the 20 November 2003 with the objectives to get input from the stakeholders on their perception of key water re-

resources issues, areas where stakeholders can actively be involved, and their advice on how the WRMD can best implement the SWRMD-II programme.

The workshop included a presentation by the civil society as well as group consultations with stakeholders on selected issues. In brief the workshop had the following outcomes:

- increased understanding among the participants of the water resources issues of Uganda and the role of the WRMD in managing the resources;
- the participants endorsed the SWRMD-II programme (as described in the Inception Report) in broad terms after a briefing on the scope and content of the work;
- through workgroups the stakeholders provided guidance to WRMD on implementation of the programme;
- consensus on a continued stakeholder involvement in the SWRMD II programme and thus in the water resources management in Uganda; and
- the civil society interest in collaborating with the WRMD on stakeholder involvement.

Further comments to the Inception Report (IR) have been received by various stakeholders, among these JPF members. The comments are being incorporated in the updated IR due in March 2004 (subject to the completion of the SSRS).

Implantation phase

The SWRMD-II is thus moving from inception to implementation. The approach to implementing the activities will be a joint effort for the WRMD and TA respecting the strategies presented in Section 2.

The key elements in the implementation phase respecting the comments received to the Draft Inception Report and during the Inception Workshop have directed the focus in the Work Plan development to address:

- awareness rising;
- flexibility and prioritisation of activities during implementation;
- holistic Work Plan based on the allocated human and financial resources;
 and
- nomination of activity leaders.

However, the successful implementation depends on the actual available staff, in relation to the new structure of WRMD. Since it was appreciated that understaffing played a role during SWRMD-I, equally important was the lack of motivation for office work in Entebbe - courses and workshops outside Entebbe and activities in the field attract significant financial rewards.

The way to overcome the above in implementing the SWRMD-II's broad range of activities will hence depend on high degree of flexibility and prioritisation of activities, motivating the staff, focusing the activities, and holistic human resource management.

Awareness rising

Already since the development of a draft WRM Decentralisation Strategy in 2002 activities in this theme it was found necessary to fast track awareness rising on WRM issues in the three districts concerned.

It has through the inception phase and notably the consolidation workshop proven to be essential to expand on the resources for awareness rising in general. Thus a number of activities have been geared to focus on both public awareness rising and inter-linkage with stakeholders, including TV and radio broadcasts, the engagement of a communication expert ("water supply is water today, water resources management is water for tomorrow").

Plexibility and prioritisation of activities during implementation The flexibility of the SWRMD-II is closely linked to the WR issues and the prioritisation of activities follows from the ranking of these. For each issue, the associated activities and resources to address the issue in a compressible manner are identified by the appropriate divisions. The numbers of WR issues that can be addressed are finally determined by the available human and financial resources. The issues are reviewed periodically, to assure that emerging issues and disaster management are included in the work plan.

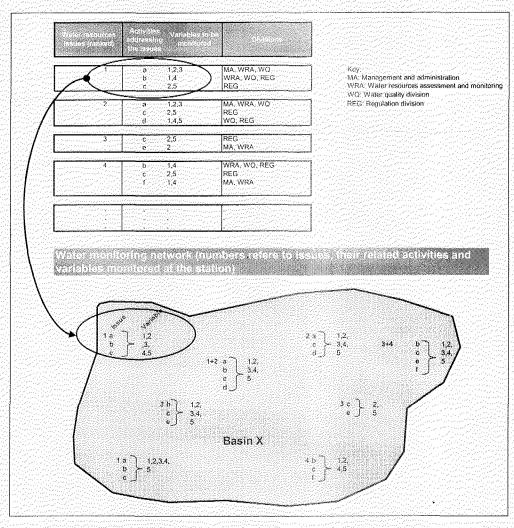

Figure 3: Schematic principle of prioritising activities

The TA recourses to address the different activities have been allocated by the WRMD to ensure the full comprehensibility of the plan. Hence, the WRMD work plan and the use of TA resources is at all time optimised vis-à-vis the most prevailing issues, and thus kept very flexible, which corresponds to the nature of the WRM process discussed earlier.

The OP-5 was born based on a first subjective assessment where the activities in each theme were divided into 5 classes. Within each class, the activities were prioritised based on their dependency and urgency with a view to the available resources.

The prioritisation of activities are related firstly to what activities are required to address the issue, and secondly to which Divisions are to be involved in it.

A first ranking of WR issues was carried out during the inception phase, however, in a subjective manner. The ranking resulted in a first prioritisation of the activities by dividing them into five classes. The OP-5 reflects this prioritisation by embarking on firstly class one activities followed by class two activities and so forth until the available resources have been exhausted.

A new prioritisation adopting the Water Resources Issues Assessment Method (WRIAM see inserted text box overleaf), shall be carried out during the first working session to obtain a more objective prioritisation of the WR issues.

The support of the WRMD staff during the implementation of activities by the TA follows the prioritised activity list. Several support activities and techniques have been identified for the execution and support as the result of an assessment of the most suitable techniques for the individual activities based on previous experiences, regarding result oriented methodologies.

Holistic Work Plan based on the allocated human and financial resources Detailed descriptions of the activities were developed in accordance with the Work Plan concept and address the following points:

- Justification for the activity (why to do it).
- Approach to the implementation (how to do it).
- Main tasks involved in the implementation (indicators for progress measurement).
- Output.
- Present status/progress of activity.
- Interfaces with other activities, divisions, projects, ministries etc.

The advantages are many, e.g. casy progress and QA monitoring in relation to the Financial Management System, unambiguous focusing of activities, avoiding overlap between activities, etc.

The EIA has become a universal requirement prior to the implementation of projects. However, the constraints faced by the authors of EIA's are of different nature according to the situation and importance of the human activities for which the

Nomination of activity leaders

During the Inception Phase, each activity was assessed and the available human and financial¹ resources allocated (aggregated level). The ambition level will hence be determined on the basis of the available resources and carried out accordingly.

The starting point for human resource management is the gradually implementation of the Work Load Prognosis (WLP) and Daily Activity Distribution (DAD), held up against Monthly Progress Reports (MPR) in the Work Plan concept. The intention is to develop a simple customised system in which relevant key information for the programmes undertaken by WRMD is collected and presented.

The approach is new in the context of GoU and the modalities for it implementation shall be developed along the Financial Management System (FMS) under the framework of Result Oriented Management (ROM).

¹ The financial resources only to 31 December 2003

One of the key elements of the allocation of resources will be the appointment of a WRMD Activity Leader for each activity, remembering that the Consultant's role is to advise and assist. Subsequently, commence the activity with a kick-off meeting in which management is present.

The activity leader will be responsible for the organisation of the work, execution of the tasks, production of the outputs and ensuring that the work is done within the allocated time schedule, and allocated human and financial resources.

This approach is especially important for the temporary functions such as decentralisation.

The WLP and DAD shall be gradually implemented to monitor progress vs. targets on a regular basis (weekly or bi-weekly). This serves as such as an early warning system before activities "capsize" in order to take remedial measures to bring the activity back on track or revise the ambition level of SWRMD-II as required.

The implementation of each activity will start with defining its allocated resources (financial and human) followed by appointing an activity leader and a team as applicable. The onset of the activity shall be made with a kick-off meeting between the activity team, the respective principal officer(s) and assistant commissioner(s), where the detailed activity description (defined in the IR) is discussed.

The role of the principal officers is in this respect is to monitor budgets, coordinate activities and guide the activity leaders in their respective sections, whilst assistant commissioners surveys their divisions overall budget and technical performance, and executes internal audit of activities as according to WRMD's QA system.

Some steps to introduce the system has already been taken and it shall gradually improved as the FMS is further strengthened and developed to include the needs of the users at component level, which will be done in close cooperation with the FMA and his team.

1.2.1 Approach to Implementation of activities

This has been addressed in four groups of implementation mechanisms.

Coordination and planning:

- Workshops
- Meetings and discussions (with stakeholders)
- Co-ordination with other programmes sharing the same human resources.

Focusing activities:

- Adapt the Work Plan as a management tool to determine the ambition level based on available resources and their allocation, and the appointment of an activity leader.
- The concept of working sessions shall be applied when justified.
- Focus water resource management on one or two sub-catchments.
- Prioritising the activities by use of systematic assessment adopting tools such as the Water Resources Issues Assessment Method (WRIAM).

In and external partners:

- Establish workgroups.
- Outsourcing.

Dissemination of results:

National consultative processes.

A brief conceptualisation of some of the above is given in the following

Workshops

Workshops are a convenient medium for setting the starting point for an issue or strategy to be implemented. Hence, workshops should only take a small proportion of the resources since implementation of findings are by far the most resource demanding.

Meetings and discussions

Many of the activities involve collaboration with other departments, ministrate agencies and other stakeholders. Such collaboration will often take the form meetings and discussions, which result in forming a workgroup.

Working sessions

A working session is an event for implementation of activities. It is by the implementation of the starting points determined in workshops that capacity is truly build.

The principle is to gather all the relevant staff at one location for an appropriate period to work continuously and uninterrupted on the activities in hand.

Workgroups

The concept of establishing workgroups with various stakeholders is based upon the principles that a Memorandum of Understanding (MoU) be promulgated in which the role of the workgroup is clearly defined along with the obligations of each stakeholder. For other specific activities, for example the production of the WRMD Year Book, it will be convenient to establish an internal WRMD workgroup.

Outsourcing

Not all activities should be executed by WRMD, either because of capacity problems, or that the scope falls without the core activities or expertise of WRMD, outsourcing is an important complementary implementation mechanism. One example is activity 259, Water resource mapping as discussed elsewhere.

National consultative process

The department routinely undertakes studies on various water resources issues of interest such as floods, droughts, hydroelectric potential of various river systems in the country etc. Many of these focussed studies are a response to identified or emerging government demands. The results of these studies or investigations contribute to holistic planning and better solutions to the problems brought about by the vagaries of the hydro-climate. The results of these studies are typically addressed to the institution that originated the demand for the study but the results are frequently not disseminated beyond this original primary audience.

TA support

The TA support can be a part of any other mechanism and concerns:

- General advice and assistance.
- Adopt a practical, hands-on approach, which provides the training and generates the required activity output.
- Support visits by TA for a cluster of activities.

The TA support will be organised in streamlined Support Events (SE) whenever possible and where more than one technique could be used at the same time, for example, training and workshops could occur during a working session. The support events will tackle a cluster of activities where one or more TAs will be present, etc.

1.2.2 Observations

The SSRS my impact on the implementation plan presented in the IR and herein. Hence, a revision of the Work Plan 2004 / 05 is due at the end of the GoU fiscal year.

The development of the Work Plan has showed to be quite resource demanding to an extent that it may be considered if the efforts are balanced with the added value. Therefore, WRMD shall propose that the procedures of the JPF shall be reviewed and mainstreamed possible as part of the up-coming technical sector review in March 2004.

2 Strategy

Strategy for SWRMD-II

The strategy adopted for the SWRMD-II in order to meet the immediate objectives has three elements:

- Improved coordination and cooperation both horizontally across sectors and vertically within sectors.
- Human resources development by training of staff in water resources
 planning and management, and by rising of awareness among authorities
 of the economic value and environmental vulnerability of water resources.
- Institutional strengthening by providing tools for water resources assessment, planning, management and monitoring.

Guiding principles

The guiding principles which govern the development of the present programme may be considered in terms of:

- A social principle (keyword: participation), that planning and management shall be carried out at the lowest appropriate level to ensure that demands are heard and participation promoted.
- An environmental principle (keyword: sustainability),
 that water shall be considered a scarce and vulnerable resource.
- An economic principle (keyword: sustainable economic development)
 that water shall be considered an economic good with a value reflecting its
 most beneficial potential use.

Operational level strategy

On the operational level, the implementation of the SWRMD-II activities will follow the strategies and approach:

- Adopting the framework set forth in the Water Sector Gender Strategy (WSGS) launched at the third GoU-Donor Joint Sector Review, September 2003.
- Adopting the framework set forth under the PEAP.
- The technical assistance will purely be advisory while the staff of the WRMD will implement the actual work. The requirements for technical

assistance were defined in the Inception Phase, but the input has been designed in such a way that it is flexible, meaning that as the consolidation goes on and a need for a specific additional TA service is identified, the service will be procured.

- Other WRMD activities like the LVEMP, NBI and Lake Kyoga Mitigation Flooding (MLKF), have been considered during the formulation of the Work Plan so as to ensure a holistic approach.
- Incorporate the undertakings defined in the GoU-Domor Joint Sector reviews even though they are not mentioned in the Component Description (CD), e.g. appropriate recommendations of the Sub-Sector Reform Study (SSRS).
- Uganda, as a member of the international community, is committed to the implementation to these and all the World Summit on Sustainable Development targets. Of particular relevance to WRMD is the WSSD target of developing integrated water resources management and water efficiency plans by 2005. The progress Uganda has made in this area needs to be consolidated. SWRMD-II has been so designed so as to actively contribute to this process, so that we can achieve this target by 2005.
- We recognise that WRMD must increase its pro-activeness in making other sub-sectors appreciate IWRM issues better. Our goal is to influence these other sub-sectors so that they adequately consider IWRM where appropriate when they are making their plans, manuals, guidelines, studies, strategies, etc. To this end, a number of SWRMD-II activities are geared towards an improved communication and information dissemination strategy.

3 Component Logical Framework Analysis

3.1 Development objective

"Enhanced capacity at WRMD for carrying out its mandate of management of the water resources of Uganda on a sustainable basis, focusing on sector reform, regulation of water abstraction and pollution monitoring and assessment of the water resources."

3.2 Immediate Component objectives

The immediate objectives for the component are:

- 1 Improved financial, organisational and institutional sustainability of WRMD.
- 2 Appropriate strategy for long-term management of Uganda's water resources developed.
- 3 Improved capacity for integrated assessment of water resources developed.
- 4 Improved capacity for regulation of water abstraction and discharge established.
- 5 Improved and consolidated capacity for water quality analysis established.
- 6 Monitoring network upgraded and operated in an integrated and sustainable manner.

This implies that WRMD shall be able to provide timely, accurate information on the state of Uganda's water resources.

3.2.1 Component Outputs and Activities

Themes, outputs and activities

The immediate objectives and the corresponding outputs contributing to enhancing the capacity and sustainability of WRMD are organised in six themes (Table 3-1).

Table 3-1 Immediate objectives and corresponding output (CD)

| Theme | Objectives | Output 1 |
|-------------------------------------|--|---|
| Management and administration | Improved financial, organisational and institutional | 222 (1.1) Improved visibility of WRM by improving reporting, coordination with stakeholders, business development, marketing and customer orientation |
| | sustainability of | 223 (1.2) Consolidated capacity for budgeting and financial management |
| | WRMD | 224 (1.3) Improved organisational sustainability |
| | | 225 (1.4) Quality Assurance (QA) system covering all aspects of WRMD's activities established, operational and used |
| Sector reform | Appropriate strategy for long term | 231 (2.1) Basis for decentralisation of Water Resource Management (WRM) consolidated. |
| | management of | 232 (2.2) Increased capacity for WRM at district level |
| | Uganda's water resources developed | 233 (2.3) Decentralised monitoring structure initiated |
| | | 234 (2.4) Sector reform for WRM supported |
| | | 235 (2.5) Strategy developed and implemented for mainstreaming gender in WRM |
| Water resources management tools | Improved capacity for integrated assessment | 241 (3.1) Tools for data management, modelling and WRM assessmen upgraded and used routinely. |
| | of water resources developed. | 242 (3.2) Capacity of both men and women for analysis and interpretation o monitoring data improved |
| | | 243 (3.3) Specific WRM studies undertaken |
| | | 244 (3.4) Dissemination of water resources monitoring and assessment result improved |
| | | 245 (3.5) New meteorological data of relevance for WRMD filed, processed and made available to WRMD in accessible format |
| Regulatory | Improved capacity for | 251 (4.1) Regulatory functions of WRMD strengthened and consolidated |
| functions | regulation of water | 252 (4.2) Water abstraction, wastewater discharge and other permit applications processed and enforced |
| | discharge established. | 253 (4.3) Strategy for bulk water allocations to districts developed |
| Water quality (WQ) | Improved and consolidated capacity | 261 (5.1) Consolidated and upgraded capacity of laboratory for routing analyses |
| | for WQ analysis established | 262 (5.2) Laboratory extended and able to analyse biological and sedimen material |
| | | 263 (5:3)Laboratory accredited for selected types of analyses |
| Water resources | Monitoring network | 271 (6.1) Monitoring network expanded from 57 to 80 surface water stations from 20 to 30 groundwater stations and from 110 to 150 WQ stations |
| monitoring network | in an integrated and sustainable manner. | 272 (6.2) Operation of updated network consolidated and run on an efficien and sustainable basis |
| | | |

Note: Output number refers to the Financial Management System numbers while numbers in brackets refer to the CD.

• Each output has a number of activities, which were prepared by WRMD and relate to its obligation to implement WRM in Uganda. There are 133 activities in the CD covering almost all of WRMD's daily work and functions. In addition activities essential to ensure a holistic approach to WRM have been defined during the inception phase bringing the total to 143.

Activity descriptions

Detailed descriptions of the activities were developed in accordance with the Work Plan concept and address the following points:

- Justification for the activity (why to do it).
- Approach to the implementation (how to do it).
- Main tasks involved in the implementation (indicators for progress measurement).
- Output.
- Present status/progress of activity.
- Interfaces with other activities, divisions, projects, ministries etc.

The advantages are many, e.g. easy progress and QA monitoring in relation to the Financial Management System, unambiguous focusing of activities, avoiding overlap between activities, etc.

3.2.2 Activities requiring particular focus

Two activities require particular focus (cf. detailed descriptions in Appendix 1):

- activity 259, Produce national and district water resources maps using Geographical Information System (GIS) technology including census of water sources; and
- activity 308, Upgrade, maintain equipment and buildings.

Activity 259

Produce national and district water resources maps using Geographical Information System (GIS) technology including census of water sources.

With the allocated human and financial resources, in accordance to the component description, two districts may realistically be mapped annually. With this pace, it will take about 20 years to cover the entire country, which is unsatisfactory, given the requests from the districts as highlighted during the WRMD Inception Workshop.

Therefore, WRMD prepared a proposal for a dedicated groundwater-mapping project funded by DfID, and is presently in parallel to the actual mapping activities perusing additional funds to complete the mapping in five years.

In brief, it is envisaged to outsource the mapping, as it is not advisable to make it a core activity of WRMD, or build this capacity internally. It is projected to engage a regional or international specialist company, as no such capacity is presently available in Uganda, which links up with at least one local company

to ensure that the capacity is build in Uganda, since it is required to maintain and update the maps subsequently.

This will call for significant additional funds, subject to a revision of the existing proposal indented for building the capacity at WRMD.

WRMD and RWSCD (as stakeholder), are presently coordinating the efforts to mainstream the activity and ensure that it includes the information required for the districts and RWSCD.

It is emphasised that parts of the GW mapping exercise includes database activities (253, 254 and 260), WR Assessment studies (264, 265), etc. Hence, the total budget for Groundwater mapping comprises these activities as well as some general budget lines (e.g. maintenance of cars, procurement of IT facilities, etc.)

Activity 308

Upgrade, maintain equipment and buildings

Two high technological instruments were acquired during SWRMD-I; A Gas Chromatograph (GC) and an Atomic Absorption Spectrophotometer (AAS).

However, the installation and training of staff was not completed under phase one and not included in the phase two component description and associated resource allocation. Therefore, the JPF was consulted in October 2003 and approved to fund an assessment to advice on the way forward. This activity has been included as part of activity 308.

The assessment is presently ongoing and expected to be concluded by end of January 2004 advising on the possible scenarios including budget implications and the sustainability.

It is stressed that the amount for a full implementation as designed for in phase I may amount to more than 500,000 USD, which will be in addition to the present Work Plan Budget.

3.3 Activity-time Schedule

The activity time-schedule (annexed Table 3.3.1) has been established based on a thorough assessment on the required time for each activity resulting in a workload prognosis to assure that the human resources are available as scheduled.

3.4 Performance Schedule

The detailed activities together with the corresponding performance indicators are annexed in Table 3.4.1.

The activities have been broken down into main task each being a milestone. The indicator value assigned to each main task is given in terms of an index value based on the following principles for:

- non numeric milestones a value indicating the workload compared to the total workload over the six quarters;
- indicators where the target value is not known (e.g. number of request received) the indicator is one (1). The target is measured at the completion level after a period after receipt, e.g. that an action plan is established within one month after receipt of the request; and
- known numeric values the value itself, e.g. number of awareness workshops successfully conducted within the period.

The targets values have been assigned to each quarter for easy progress monitoring.

3.5 Activity budget

The detailed activity budget (annexed Table 3.5.1) has been prepared based on the broad thematic areas presented in section 3.2. The total donor budget presented includes the no used funds from the last quarter in the 2003 revised budget and special input regarding the atomic absorption spectrophotometer and the gas chromatograph from the unallocated component budget as approved by the JPF in November 2003 (USD):

Vehicles 300,000 Computers 60,000

COWI invoice 201,000

TA services 27,000

In total USD 588,000, bringing the ceiling at USD 1,983,000.

The Technical Assistance (TA) has been allocated under Overhead and hence not included in the individual activities listed. The taxes are not added to the totals in the budget. Exchange rates adopted; UGX/USD 1,925, DKK/USD 6.32.

3.6 Expenditure budget

No particular comments to annexed expenditure budget.

3.7 Procurement plan

The procurement plan (annexed Table 3.7.1) is mainly based on various strategies as that developed for the vehicles. Hence, most procurement cannot be quantified as it includes much different kind of items (e.g. computers, printers, toner, etc.) set up in an annual framework contract.

WRMD has introduced CC (Contract's Committee) in the column named agency as this is missing. As the CC decides upon the procurement method WRMD has changed the name to "desired method"

Appendix 1 - Selected detailed activity descriptions

Activity 259

Produce national and district water resources maps using Geographical Information System (GIS) technology including census of water sources

Justification

The maps are necessary for guiding water resources development and management at district and higher levels. They will be used for selection of intervention areas for water supply programmes, evaluation of technology options, planning of drilling campaigns incl. budgeting, permits, etc.

Approach

Surface water, groundwater and water quality maps will be produced from data stored in the databases together with data collected from other sources and from the field. The initial mapping tasks will, if no additional funds are obtained, be handled in-house while the extension to the entire country may be outsourced.

Main Tasks

Review and continue the process initialised under RUWASA and the pilot groundwater mapping project extended to a few more districts (approximately 5), improving the value of the maps. Add surface water and expand on water quality (both ground and surface water) maps for the selected areas.

The following tasks are involved:

- Data collection, control and entry into databases.
- Data analysis, interpretation, assessment and presentation.
- In-filling of field data.
- Verification of outputs.
- Preparation and dissemination of final maps and reports and training in use.
- Assessment of map and report utilisation.

The experience from the previous efforts on groundwater mapping have shown that the task is most resource demanding and calls for additional funding if the entire country shall be mapped.

Reference is made to the ToR already prepared ("Proposal for Mapping Groundwater Resources in Uganda"). This project, if funded, would provide the financial basis for the extension of the groundwater mapping to the entire country. Although it concerns groundwater resources alone, it can be used as a model for surface water and water quality as well.

- Peruse the funds for the groundwater mapping to satisfy support to the districts regarding water supply of rural area.
- Revise the approach if funds are obtained.

Output

Water resources maps for selected district.

Additional funds for extending the mapping to the entire country.

Status

For groundwater 9 districts were mapped as a pilot activity under the RUWASA programme while 3 other districts in central Uganda are close to completion. A Pilot study of Kibale District has been carried out by WEGS consultants. For surface water and water quality, the maps are yet to be made.

Interfaces Database activities (253, 254) and WR Assessment studies (264, 265).

Coordination between groundwater, surface water and water quality.

Activity 308 Upgrade, maintain equipment and buildings

Justification Well functioning analysis equipment and adequate laboratory facilities are

required for running a laboratory providing services of high standard.

Approach Assessment of present laboratory conditions and evaluation of necessary

upgrading and maintenance are an on-going activities in the WQ Division.

Main tasks The main tasks will comprise an assessment of the present status of equipment

and buildings, development of maintenance plans and schemes, procurement and implementation plans. Recommendations given under the previous phase

should be taken into consideration.

Output Adequate laboratory facilities, maintenance plans and schemes, procurement

specifications and implementation plans.

Status The updating of laboratory facilities is a continuous process and reviews are

made routinely by the WQ Division as part of the quality system.

Recommendations have been given under the previous phase. The AAS and the GC are presently non-operational due to missing parts and software problems. Perkin Elmer has been contacted for making the equipment operational and the

laboratory still waits for reply.

It is noted that the laboratory is planning to expand the services to include

sediment and biological measures (act. 313-322) which will require additional

laboratory facilities.

Interfaces Co-ordinate with the activities 313 - 319.

DWD, WRMD, WQ laboratory, clients and projects, the public.

| | Collaborate with other agencies and departments in carrying out water resources assessment studies and formulation of guidelines and standards. | Potential partners identified and a startegy developed (0.5), MoU with stakeholders prepared and implemented (0.5), Potential partners identified and a strategy developed (50), MoU with stakeholders prepared and implemented (50), One workshop for selected agencies (1) | 21 | 41 | 41 | 41 | 41 | 21 | 144 | 144 |
| | Identify and assess specific needs for water resources information to different stakeholders | Stakeholder census results out (50), and dissemination strategy developed (50) | | 50 | | | 50 | | 50 | 50 |
| 00278 | Prepare and disseminate reports targeted to specific stakeholders | WRM Communication strategy developed (30), ToR for consultant develop (10), implemented and reviewed (30/each 6 months), WRMD comunications strategy developed (30), ToR for consultant developed (10), implementation and review (30/each 6 months), List of stakeholder data needs (20), Report formats developed (molemented (80) | | 60 | 20 | 130 | 30 | 30 | 210 | 210 |
| | 3.5 New meteorological data of relevance for WRMD filed, | | | | | 1.00 | | 50 | 210 | 1 |
| | processed and made available to WRMD in accessible format. | | | | | | | | | |
| 00279 | Draft memorandum of understanding with UMD | Draft copy of memorandum done (80), Memorandum signed (20) | 80 | | | 20 | | | 100 | 20 |
| 医海绵 医多类性病 医原 | Establish rain WQ and climatic monitoring network in collaboration with UMD | Define network and procure equipment (50), Install and test equipment (50) | | 50 | 40 | 60 | 50 | | 150 | 150 |
| 00281 | Develop guidelines/methods for rainwater sampling and preservation. | Sampling and handling methods documented and tested (1) | | | | 1 | 1 | | 1 | |
| 00282 | Train staff of UMD in rain water sampling and handling | 2 training sessions for selected UMD Staff | | | | 13324 | 1 | 1 | | 2 |
| 250 | Regulatory functions | | | | | | | | | |
| 251 | 4.1 Regulatory functions of WRMD strengthened and consolidated | | | | | | | | | |
| 00283 | Prepare office space for staff, filing cabins, computers, etc. | Services procured for construction of office block by 3rd quarter of 2004/5 FY | 20 | 80 | | | | | 100 | |
| 2 | Fully develop guidelines, checklists for various EIA types. | EIA sectoral guidelines developed and adopted Dec 2005 | | | | 30 | 30 | 40 | 30 | 100 |
| | Make the following definitions: non-consumptive water use, areas that do not immediately require water permits, limits on use of water including areas, sources, and regulations in times of shortage or anticipated shortage. | | | | | | | | | |

| Code | 1 | | Q-3 | 0-4 | Q-1 | Q-2 | Q-3 | Q-4 | 2004 | 2005 |
| | Review and establish procedures and guidelines for enforcement of the wastewater discharge regulations. Revise the regulations and statutory instruments. | | | | | | | | | |
| | Update guidelines for processing water abstraction permits and prepare guidelines for processing drilling and hydraulic works construction permits and easement certificates | Guidelines and procedures for processing permits of all kinds adopted and used by technical sections by Dec 2005 | 15 | 15 | 15 | 15 | 20 | 20 | 60 | 70 |
| | Prepare a strategy for decentralisation of some water permit functions to districts and prepare guidelines and procedures for their implementation | | | | | | | | | |
| 00289 | Develop/review guidelines, management procedures and control systems for implementation/ enforcement of the regulations. Revise existing regulations and draft statutory instruments where required. Review the Water Statute in light of the implementation experience | | | | | | | | | |
| 00290 | and capacity for implementation of the statute and draft necessary amendments. | | | | | | | | | |
| 252 | 4.2 Water abstraction, wastewater discharge and other permit applications processed and enforced | | | | | | | | | |
| | Finalise identification of functions to be carried out as part of enforcement of the regulations. | | | | | | | | | |
| | Administer water abstraction, drilling, hydraulic works construction, wastewater discharge permits and easement certificate and the register of permits | Permits registered and issued within the stipulated 90 days period with at least 95% accuracy | 15 | 15 | 15 | 15 | 20 | 20 | 60 | 70 |
| 00293 | Strengthen capacity for regulation of hydraulic works (dams, reservoirs, weirs, etc) | Capacity of DWD staff in handling hydraulic works construction permit applications increased by March 2005 | 25 | 25 | 25 | 25 | | | 100 | 50 |
| | Monitor utilisation of and activities on the water bodies, to see that they are in compliance with water resources management policies, laws, regulations, standards and plans | Atleast 6 quarterly visit to waste discharge establishment (6) ,90% of watr users complying with at least 80% of the water policies, laws and standards by July 2005 | 6 | 6 | 6 | 36 | 36 | 36 | 54 | 114 |
| | Improve and implement the permits public awareness and communication strategy and raise awareness among potential applicants of their obligations to apply for permits | 20% increase in submission of applications for permits by December 2004 | 15 | 15 | 15 | 15 | 20 | | | |
| | Develop the water permits database further | Updated water permits database operational by April 2005 | | 25 | 25 | 25 | 25 | | 75 | 75 |
| 00297 | Provide assistance to small users to comply with standards | | | | | | | | | |
